EDUCATION

Sinhgad College of Engineering

Bachelor of Engineering in Computer Science, Minor in Data Science

Pune, Maharashtra

Aug. 2023 – May 2027

School of Scholars

Higher Secondary Education

Nagpur, Maharashtra

2023

EXPERIENCE

Mobile Application Developer

Jan. 2026 – June 2026

InvizioX

Mumbai, Maharashtra

- Developed and optimized a cross-platform client application using React Native and Expo, reducing application load time by 30% through component and asset optimization
- Architected 7+ modules for dashboards, portfolios, and transactions, reducing navigation time by 25%
- Created real-time analytics dashboards using WebSockets, improving portfolio monitoring efficiency by 40%
- Designed a reusable UI component system and automated build workflow using NativeWind CSS and Expo EAS, reducing feature development time by 30%

Full Stack Web Developer

Nov. 2023 – April 2024

E-Cell SCOE

Pune, Maharashtra

- Delivered full-stack applications for 3+ startups using React.js, Next.js, Node.js, Express.js, and Flask
- Crafted responsive interfaces using React.js, JavaScript, CSS, and GSAP, improving conversion rates by 30%
- Integrated MongoDB, SQL, Firebase, and Docker, improving query performance by 35%
- Delivered 4 product launches and 10+ feature enhancements across client projects

PROJECTS

AgriGuardian: AI Crop Disease Detection | *React Native, FastAPI, Python, OpenCV, TensorFlow, Supabase*

- Built an AI-powered agriculture platform using React Native, FastAPI, and Supabase for crop monitoring
- Developed a Python-based backend using FastAPI to serve a CNN-based image classification model (VGG16, InceptionV3, ResNet50), achieving 94% disease detection accuracy
- Processed and analyzed sensor data from 6+ IoT devices alongside weather data to generate recommendations
- Applied design principles to structure a modular backend supporting multi-language output for 15 languages

Document Intelligence Hub | *Next.js, FastAPI, LangChain, FAISS, MySQL, Hugging Face*

- Developed an multimodal Retrieval-Augmented Generation (RAG) platform supporting PDF, image and audio retrieval
- Built OCR, speech-to-text, and vector search pipelines using FAISS, LangChain, Whisper, and Hugging Face
- Implemented citation-backed semantic search using FastAPI, MySQL, Gemma, and Mistral
- Designed a scalable architecture for secure offline knowledge retrieval and cross-modal search

EchoGuide: AI Vision Assistant | *Python, Computer Vision, YOLOv8, OpenCV, PyTorch, Deep Learning*

- Designed & implemented voice-assisted navigation tool, boosting visually impaired user mobility accuracy by 85%
- Developed Python-based computer vision scripts using YOLOv8 and OpenCV, achieving 92% object detection accuracy for real-time obstacle alerts
- Built and tested a face recognition module in Python, reaching 95% detection accuracy for contextual feedback

TECHNICAL SKILLS

Languages: Java, C++, Python, JavaScript, TypeScript

Core CS: Object-Oriented Programming (OOP), Data Structures & Algorithms, Database Management, Operating Systems, Software Engineering Principles, System Design, Computer Networks

Backend & APIs: FastAPI, Flask, Node.js, Express.js, REST APIs

Databases: MySQL, MongoDB

Data & AI: Pandas, NumPy, Scikit-learn, Matplotlib, TensorFlow, OpenCV, LangChain

Frontend: HTML, CSS, React.js, React Native, Next.js

Developer Tools: Git, Github, VS Code, Docker

ACHIEVEMENTS & EXTRACURRICULAR ACTIVITIES

- Participated in 8 national and international hackathons, winning 2 through innovative problem-solving and execution
- Solved 350+ coding problems across platforms including LeetCode and participated in coding competitions at colleges
- Volunteered with Prayas NGO to teach computer fundamentals and modern technology to children in rural and underserved communities, promoting digital literacy and awareness
- Organized free medical camps to improve access to basic healthcare for underserved communities and donated blood to support emergency and life-saving medical needs
